Abstract—This article reviews the use of time-resolved fluorimetric detection of lanthanide chelate luminescence as a detection method for ultrasensitive bioanalytical assays. Assay formats and detection methods, and the principle of time-resolved fluorimetric detection, are described. Detection systems, assay formats, reagents, and instrumentation for time-resolved fluorimetric detection are outlined. A review of published and commercially available immunoassays and DNA hybridization assays using time-resolved fluorimetric detection of lanthanide chelate luminescence is given.

Keywords—Immunoassay, DNA hybridization, DNA probing, detection technique, time-resolved luminescence, lanthanide chelate.

CONTENTS

§Corresponding author.

Abbreviations—ALP, alkaline phosphatase; APC, allophycocyanin; BCPDA, 4,7-bis-(chlorosulfophenyl)-1,10-phenanthroline-2,9-dicarboxylic acid; DELFIA®, Dissociation-Enhanced Lanthanide Fluoroimmunoassay; DTPA, diethylenetriaminepentaacetic acid; EALL, enzyme-amplified lanthanide luminescence; HRP, horseradish peroxidase; pAS, *p*-aminosalicylic acid; PCR, polymerase chain reaction; SA, salicylic acid; SBR, specific binding reagent; TBP, trisbipyridine cryptate; TSH, thyrotropin.
