Insert the SAS DVD into your DVD drive. This should automatically start the installation process. If it doesn’t, locate the “setup-exe” file on the DVD and double-click on it. The SAS Deployment Wizard will start.

(The screenshots for this guide were taken under XP Pro. The install process under Vista will be similar).

Select a language (usually English) and click “OK”.

Select the “Install SAS software” option and click “Next”.
This is the default location where SAS will be installed. Click “Next”.

If you have a previous version of SAS installed at the same location, you will see this dialogue box. Click “Yes” to have version 9.2 replace previous versions.

The list of products that will be installed will be displayed. Click “Next”.

The list of products that will be installed and their expiry date will be displayed. Click “Next”.
SAS gives you one more opportunity to verify the products you want to install. Click “Start”.

SAS will see if your computer has the system requirements on your computer to install SAS. Click “Next”.

SAS will perform a system check. If it determines that certain (Microsoft) software components are missing from your computer, it will install them. After SAS has completed the system requirements check (or determines that a system update is not required), click “Finish”.

SAS may ask you to re-boot your computer (depending on which components it may have had to install). You can leave the SAS DVD in your DVD drive.

The SAS Deployment Wizard will start. It will ask you again for the language (usually English). Click “OK”.

The installation process begins. Please be patient. It takes quite a bit of time to install the software, particularly the “SAS Foundation” component. As long as the “Installing SAS” boxes are flashing (see green arrow), the software is being installed. Depending on the speed of your computer, it may take 20-30 minutes to complete this phase of the installation.
On the “Select Support Option” dialogue box, click “Next”.

Click “Finish”.

This completes the SAS 9.2 installation.

Please return the SAS DVD to the Licensed Software Office as soon as possible.
