# Social characteristics and economic performance - Snapshots

- Moncton (29/33) and Trois-Rivières (27/33) are among smallest CMAs
- Moncton among fastest growing CMAs (10th), Trois-Rivières 26<sup>th</sup>
- Percentage of high-growth small firms (1995-2000)\*...
  - Moncton: 1,7 and Trois-Rivières: 1,4
- Science and engineering employment shares of total employment -2000 and 2001\*\* Moncton: 4,0 and Trois-Rivières: 2,9
- Between 1996 and 2006, both Moncton and Trois-Rivières firmed their position as regional centres for health, education and government jobs
- While the share of managerial, business/finance and science-related occupations grew in Moncton, it declined/plateaued in Trois-Rivières
- Conversely, arts and culture, sales/service and trades/transpo occupations grew in Trois-Rivières, but shrunk in Moncton

### **Theme 1 - Knowledge Flows**

- "...our hypothesis is as follows: the economic performance of city-regions depends on the structure (density and diversity) of local networks – in particular, a mix of strong and weak ties, a mix of local and non-local ties, as well as the heterogeneity and diversity of economic actors belonging to these networks"
- Considering the RIS' literature
  - Mature/traditional sectors in Trois-Rivières should be our "best performers"...and they are not !
  - The five sectors studied in Moncton should be experiencing "some very serious problems" ...and they are not !
  - But with the same pattern of interactions than those five sectors, Trois-Rivières "new" high-tech sectors are !
- The comparative case of Moncton Trois-Rivières challenges this hypothesis

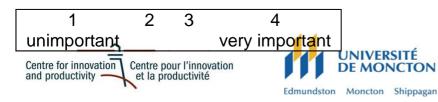

# Theme 2 - Social Foundations of Talent Attraction and Retention

| Quality of place<br>characteristics                                 | Moncton                     |                             | Trois-Rivières       |                  |
|---|-----------------------------|-----------------------------|----------------------|------------------|
|   | Talent attraction           | Talent retention            | Talent<br>attraction | Talent retention |

| Others characteristics  | 2 / 1                       | 4 / 2                       | 1                    | 2                |
| (access to nature, open spaces,<br>leisure, cool/fashionable, etc.) | natural / built             | natural / built             |                      |                  |

#### Theme 2 - Social Foundations of Talent Attraction and Retention

- "The hypothesis for Theme 2 research examines whether the social foundations of talent attraction and retention depend on a set of characteristics that define quality of place, including cultural dynamism, social diversity, openness and tolerance, social inclusion, and cohesion"
- The comparative case of Moncton Trois-Rivières challenges this hypothesis
  - the characteristics identified by respondents are different
    - talented workers come and stay for jobs in or related to their creative domain
    - all the others factors play a "smaller" role in their decision to stay and almost no role in their decision to come

## Theme 3 - Collaboration and governance for regional development

|                            | Moncton  | Trois-Rivières      |  |
|----------------------------|--|---------------------|--|
| Forms of governance        | Concentric rings governance  | Governance <u>s</u> |  |
|                            | (Wider structures in place, but core decisions made / vetted via elite)                    |                     |  |
| Collaboration/coordination | Weak   | Weak                |  |
| at the regional level      | (Dieppe as an edge city)   |                     |  |
| Regional governance        | Weak   | Weak                |  |
| Local governance           | Strong   | Strong              |  |
| Inclusivness               | <i>Immigration</i> championed in economic discourse, but little done for <i>immigrants</i> | -                   |  |

# Theme 3 - Collaboration and governance for regional development

- "... to what extent does the economic performance of cityregions reflect their ability to generate effective new forms of associative governance and collaborative leadership ?"
- The comparative case of Moncton Trois-Rivières challenges this hypothesis
  - In terms of governance Moncton and Trois-Rivières have the same characteristics
    - "In terms of economic development, regional governance simply doesn't exist"
    - "Regional regress" in Moncton amalgamation threat in 1990s leading Dieppe to opt out of regional mechanisms
  - Yet their performances differ

### Conclusions

- Although Moncton and Trois-Rivières city-regions share a lot of "social characteristics", their economic performance is significantly different
- In light of our results, it is fair to say that for small CMAs
  - regional institutions, interactions at the regional level, regional identity and also "quality of place" appear insignificant as the locus and key determinants of innovation and economic performance
  - when we consider what is actually taking place (actions instead of "discours"), we find a much messier dynamic : importance of extra regional interactions, multiple identities, shifting identities and orientations, struggles between "spatial levels", struggles between actors, etc.
- Consequently, <u>at least for small city-regions</u>, we should be careful and have a closer look at those issues before making over-generalizations about the role and importance of a RIS and its "social characteristics" as key determinants of economic performance
