Hello,

The Musculoskeletal Program at Toronto Rehabilitation Institute (TRI) has developed a new Pain competence assessment tool (PCAT) to assess competence among clinicians managing chronic pain (CP) patients. Now we are conducting a reliability testing for the new PCAT.

To do this, we are recruiting clinicians (family physicians, nurses, physiotherapists, pharmacists, social workers, and psychologists), who are working at a primary care settings (family physician clinics or community clinics) either in a solo or team practice, to participate in this study and answer the PCAT questions once.

Participation in this study involves answering the case-scenario questions included in the online PCAT. This will take a maximum 40 minutes. You can take the questionnaire anytime, and you can stop, save and continue later at your convenience. Your participation is voluntary and all information will remain confidential. Your answers will be kept as de-identified. You may withdraw from the study at any time.

As an appreciation for your time, you will be compensated by a $25 gift card. To receive your gift card or if you have any questions, please contact me by email at samah.hassam@uhn.ca or call at 416-550-8447 ext. 7821

By completing this questionnaire, you are consenting to participate in this study. To begin, please click the survey URL below or copy and paste the link in your browser:
